

What is Microsoft Intune?

Microsoft Intune is a cloud-based service that helps organizations manage and secure devices, apps, and data. It is part of the Microsoft Endpoint Manager suite and is used for Mobile Device Management (MDM) and Mobile Application Management (MAM).

INTUNE APPLICATION DEPLOYMENT STEPS

Intune Application Deployment refers to the process of delivering and managing apps on users' devices using Microsoft Intune.

1. Set up Intune subscription

- Get a license and activate Intune for your organization.

2. Add, configure and protect apps

- Decide which apps users need and set protection rules for them.

3. Create compliance policies

- Define what a "secure" or "healthy" device looks like (e.g., must have a password).

4. Configure device settings

- Apply settings like Wi-Fi, VPN, encryption, etc., to devices.

5. Enroll devices

- Connect users' devices to Intune so they're managed and secured.
